The project shows itself as a single compact volume housing both the primary school and the gymnasium. The adopted strategy aims to keep together those two functions in order to leave a wider area to be dedicated as the contraction of the contractto the equipped garden.

The axes that draws the intervention mark as many lines of the reconfigured space: the architectural axis (east-incomplete the configured space) and the configured space of the configuration of the configuwest), on which the newschool "rests", and the urban one (north-south), which scan the sequence square-recreational court-accesses.

The volume, starting from a solid prism, has been defined by successive rejects and slips that identify a reason defined by successive rejects and slips that identify a reason defined by successive rejects and slips that identify a reason defined by successive rejects and slips that identify a reason defined by successive rejects and slips that identify a reason defined by successive rejects and slips that identify a reason defined by successive rejects and slips that identify a reason defined by successive rejects and slips that identify a reason defined by successive rejects and slips that identifies the reason defined by successive rejects and slips that identifies the reason defined by successive rejects and slips that identifies the reason defined by successive rejects and slips that identifies the reason defined by successive rejects and slips that identifies the reason defined by successive rejects and slips that identifies the reason defined by successive rejects and slips that identifies the reason defined by successive rejects and slips that identifies the reason defined by successive rejects and slips that it is a reason defined by successive rejects and representation of the reason defined by successive representation of the reason defined by successive representation of the respect of the reason defined by successive representation of the reasonfunctional blocks. The porchover looking the square guides students to the school main entrance and to the one-school main entrance and to the one-school main entrance and to the one-school main entrance and to the other porchovers of the school main entrance and to the other porchovers of the school main entrance and to the other porchovers of the school main entrance and to the other porchovers of the school main entrance and to the other porchovers of the school main entrance and to the other porchovers of the school main entrance and the school main entrance and to the other porchovers of the school main entrance and the school main entrancdedicated to the gym. The gymnasium volumes et back, compared to the main school block, identifies agenerous and the school block of the schoolsquare. In this way the gymnasium has been drawn as a pin between the primary school and the secondary on e that will be realized at a later time.

A composition that generates an architectural organism characterized by formal simplicity, volumetric compact-size of the composition of the compact of the composition of the composiness and constructive rationality.

TOR MARANCIA CULTURAL HUB

Rome (Italy) location:

client: Town of Rome - Public Buildings and Urban Maintenance Department

timetable: 11.2020-04.2021

The proposed project for the new "Le Rolliet" districts how sits identity thanks to a compact volume that respects the size marked in the modified PLQ master plan. The project defines a regular and continuous facade grid, punnished and the project defines a regular and continuous facade grid, punnished and the project defines a regular and continuous facade grid, punnished and the project defines a regular and continuous facade grid, punnished and the project defines a regular and continuous facade grid, punnished and the project defines a regular and continuous facade grid, punnished and the project defines a regular and continuous facade grid, punnished and the project defines a regular and continuous facade grid, punnished and the project defines a regular and continuous facade grid, punnished and the project defines a regular and continuous facade grid, punnished grid, punnishedctuated only by horizontal concrete rows and by the alternation of solid parts, baywindows and empty log gias.The project takes up the desire for a program matic mix and holds the different apartment types in a global visual and the different apartment types in a global visual and the different apartment types in a global visual and the different apartment types in a global visual and the different apartment types in a global visual and the different apartment types in a global visual and the different apartment types in a global visual and the different apartment types in a global visual and the different apartment types in a global visual and the different apartment types in a global visual and the different apartment types in a global visual and the different apartment types in a global visual and the different apartment types in a global visual and the different apartment types in a global visual and the different apartment types in a global visual and the different approximation appcontext producing, as a result, that the types of dwellings may not be detected from the outside.

The proposed project allows all dwellings, except the little stones, to have a double East-Westorien tation, guantum of the proposed project allows all dwellings, except the little stones, to have a double East-Westorien tation, guantum of the proposed project allows all dwellings.ranteeingeachapartmentahighqualitysunlight. In addition, the project doesn't search for a distribution of the $apartments purely in a {\it 'day-nightzone'} sequence (producing an exclusive distribution of all the bedrooms on the {\it 'day-nightzone'} sequence (producing an exclusive distribution of all the bedrooms on the {\it 'day-nightzone'} sequence (producing an exclusive distribution of all the {\it 'day-nightzone'} sequence (producing an exclusive distribution of all the {\it 'day-nightzone'} sequence (producing an exclusive distribution of all the {\it 'day-nightzone'} sequence (producing an exclusive distribution of all the {\it 'day-nightzone'} sequence (producing an exclusive distribution of all the {\it 'day-nightzone'} sequence (producing an exclusive distribution of all the {\it 'day-nightzone'} sequence (producing an exclusive distribution of all the {\it 'day-nightzone'} sequence (producing an exclusive distribution of all the {\it 'day-nightzone'} sequence (producing an exclusive distribution of {\it 'day-nightzone'} sequence (producing an exc$ easts ide and all the living spaces on the west side), but it proposes a specular disposition of the dwellings which the dwelling spaces of the dwelling spaceare nested around the stairs cores.

The project proposes a very ordered structural framework allowing a development aligned with the announced structural framework allowing and the project proposes a very ordered structural framework allowing a development aligned with the announced structural framework allowing a development aligned with the announced structural framework allowing a development aligned with the announced structural framework allowing a development aligned with the announced structural framework allowing a development aligned with the announced structural framework allowing a development aligned with the announced structural framework allowing a development aligned with the announced structural framework allowing a development aligned with the announced structural framework allowing a development aligned with the announced structural framework aligned with the announced structural framework aligned with the announced structural framework aligned at the structural frameconstruction cost. The project of fers a simple materiality composed of a cladding made of vertical woodens latsured to the construction of the(Swiss white fir) alternating with prefabricated concrete bands. The wooden cladding gives the building an unsupplied of the property of thedeniably domestic ', warm and natural aspect. The concrete bands, on the other hand, per mittore ad the building and the buscale.

MARCO MARTELLO SCHOOL COMPLEX

Petriolo (Italy) location: client: Town of Petriolo (MC) in partnership with: Architect Enrico Robazza

consultants: Incide engineering (structure and engineering); Muner ingegneria (HVAC engineer); Omniacustica (acoustic)

2 460sqm gross surface: 2,7M € excl. VAT cost: feasibility study phase: 09.2020-12.2020 timetable: awards: 4th prize

Starting from the analysis of the context and the brief guidelines, the project proposes the insertion of a single propose of the project project project project propose of the project prcompact volume housing both the new school and the gymnasium.

The adopted strategy arises from the belief of keeping together the two macro-functions in order to leave a larger of the contraction of the conarea to be dedicated to the garden.

Two axes draw the design, marking as many guidelines for the reconfigured space: the first (west-east) represents the architectural axis linking Petriolohistoric center with the new school/civic center; the second (south-north) is a constant of the property of the propethe urban axis that put in physical connection the square-recreation alcourt are a and the ludic-sport dedicatedare a of the garden at the lowest level. Strengthening the set wo guidelines means to trigger public spaces revitable.lization processes, ensuring that the new school complex can be configured as a social reference point for the light contraction of the configured as a social reference point for the light contraction of the light contrlocal community.

The material it y of the new building further emphasizes its belonging to this county, while claiming a strong chro-like and the property of the property ofmatic identity thanks to the chosen tints both for the prefabricated cladding panels and the aluminum window and the contraction of the contractframes.

The singular or ographic condition and the physical limits which mark the size of the site have or iented the choice of the size of theof location towards the design of an urban space in which these abecomes the privileged opening point towards the design of a new property of the property owhich to orient. The construction of a new story telling finds a strong analogy in the spatial sequence typical of the construction of a new story telling finds a strong analogy in the spatial sequence typical of the construction of a new story telling finds a strong analogy in the spatial sequence typical of the construction of a new story telling finds a strong analogy in the spatial sequence typical of the construction of a new story telling finds a strong analogy in the spatial sequence typical of the construction of a new story telling finds a strong analogy in the spatial sequence typical of the construction of a new story telling finds a strong analogy in the spatial sequence typical of the construction of tItalian theaters: foyer-platea-scena-quinta.

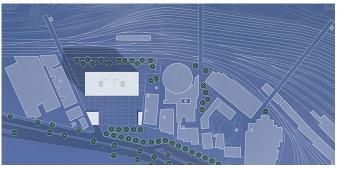

far the node of the new relationship between Catania and the Ionic coast.

The presence of the railway line between the site and the coast does not represent a visual limit, but just a physinal properties of the railway line between the site and the coast does not represent a visual limit, but just a physical properties of the railway line between the site and the coast does not represent a visual limit, but just a physical properties of the railway line between the site and the coast does not represent a visual limit, but just a physical properties of the railway line between the site and the coast does not represent a visual limit, but just a physical properties of the railway line between the site and the coast does not represent a visual limit, but just a physical properties of the railway line between tcalone. Going beyond this limit has been possible thanks to the design of a series of footbridges referred to the account of the contraction ofbuilding layout that allow to reach the coast.

The office building for the Catania Justice Court want to symbolize the ambition of the state to improve and strength of the catania for thegthen the institutional and constitutional role of Italian justice system. A monolithic vertical volume in which light, and the constitution of the constitution oftransparency and clarity prevail has been contraposed to the low and introverted ones, covered with bricks, that the contraposed to the low and introverted ones. The contrapose describes the contrapose of thecharacterize the context.

Throughsome circumscribed soil remodeling operations and are fined formal abstraction, the project carefully adapts to site conditions: topography, solar thermal orientation, views (what is seen and how it is seen) and, furthermore, accessibility conditions.

SCUOLA NEL PARCO SCHOOL COMPLEX, COUNTY ARCHIVE AND URBAN RENOVATION

Parma (Italy) location: client: Town of Parma 6 800sqm gross surface: 7,5M € excl. VAT cost:

international competition phase:

timetable: 01.2020-03.2020 awards: 6th prize

The Masterplan has been conceived as a linear campus attested on via Gronchi. The volumes are aligned to a precise or thogonal grid and arranged according to "functional bands" with different degrees of permeability. It 's a rational, compact and linear system which allows optimal management of logistics and mobility, as well as the compact and linear system which allows optimal management of logistics and mobility, as well as the compact and linear system which allows optimal management of logistics and mobility, as well as the compact and linear system which allows optimal management of logistics and mobility, as well as the compact and linear system which allows optimal management of logistics and mobility, as well as the compact and linear system which allows optimal management of logistics and mobility as well as the compact and linear system.a clear and efficient arrangement of the new buildings.

The building that will host the new secondary school consists of two volumes: the first one is low and it contains the building that will host the new secondary school consists of two volumes: the first one is low and it contains the building that will host the new secondary school consists of two volumes: the first one is low and it contains the building that will host the new secondary school consists of two volumes: the first one is low and it contains the building that will host the new secondary school consists of two volumes: the first one is low and it contains the building that will host the new secondary school consists of two volumes: the first one is low and it contains the building that will host the new secondary school consists of two volumes: the first one is low and it contains the building that will host the building that will have a support of the building that will be a support of the building two buildings of the building that will be a support of the buildall the public functions; the second one is organized on three levels and it hosts the school functions and facilities.Two transversal and parallel axes hold together the public space of the public squares, the entrances chool court-income and the public squares are the public squares are the public squares are the public squares and the public squares are the public squares and the public squares are the publicy ards and the schools themselves. The first axis consists of a porch, parallel to via Gronchi, where are located all a porch and the schools themselves. The first axis consists of a porch, parallel to via Gronchi, where are located all a porch and the schools themselves. The first axis consists of a porch, parallel to via Gronchi, where are located all a porch and the schools themselves. The first axis consists of a porch, parallel to via Gronchi, where are located all a porch and the schools themselves. The first axis consists of a porch and the schools the school and the schools are located all and the schools are located as a porch and the schools are located as a porch and the schools are located as a porch and the school and the school are located as a porch and the school $the main entrances. The school courts function like the early Christian basilic as {\it `criptoportici''}: real open-air rooms$ collecting the user flows while, at the same time, creating calms paces suitable both top lay and social relations.The second axis is the entrance gallery to the schools: a filter space where has been placed all the collective functions of the new schools as well as the administrative offices and the staff rooms.

TOWN HALL WITH MUNICIPAL LIBRARY AND MEDICAL CENTER

Santa Valburga (Italy) location:

client: Town of Ultimo - Santa Valburga (BZ)

Sinergo Spa (engineering) consultants:

gross surface: 1 680sgm 2,8M € excl. VAT cost:

international competition phase:

07.2019-11.2019 timetable:

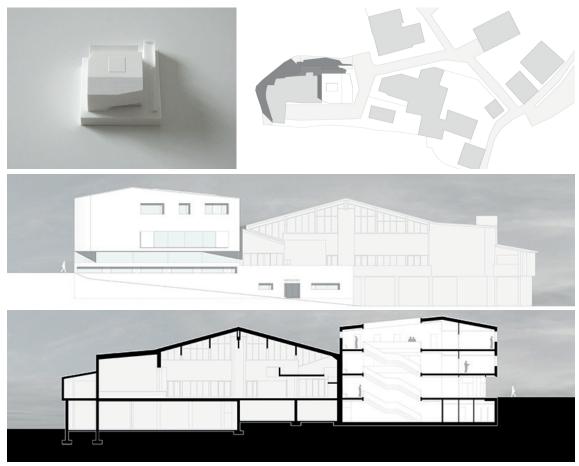

The new Ultimo Town Hall building establishes measured relations with the context of this part of the inhabited of the context of the part of the context of the contextcenter:theassociationhallwithannexedfunctions,towhichthenewvolumeisconnectedtowardssouth-east;the terrace of the tea-room building towards north-west; the surrounding residential buildings with plastered facadesand pitched roofs.

The new Town Hall, thanks to its volumetric presence, even if the design looks quite essential and rigorous, between the new Town Hall, thanks to its volumetric presence, even if the design looks quite essential and rigorous, between the new Town Hall, thanks to its volumetric presence, even if the design looks quite essential and rigorous, between the new Town Hall, thanks to its volumetric presence, even if the design looks quite essential and rigorous, between the new Town Hall, the new Town Hall,comes an important reference point, harmoniously relating to the urban context.

In this way, the project claims are cognizable identity for the new public building, so as to contribute shaping the area of the project claims are cognizable identity for the new public building, so as to contribute shaping the project claims are cognizable identity for the new public building, so as to contribute shaping the project claims are cognizable identity for the new public building, so as to contribute shaping the project claims are cognizable identity for the new public building, so as to contribute shaping the project claims are cognizable identity for the new public building are contributed by the project claims are cognizable identity for the new public building are contributed by the project claims are cognizable identity for the new public building are contributed by the project claims are contributed by the contributed by the project claims are contributed by the contributeurban spaces in which most of St. Valburga's public life will take place.

The main suggestion was provided by the tiny church of S. Maurizio and by the purity of its volume formed by the property of the property ofjuxtaposition of two simple solids: the nave and the choir.

From the architectural point of view, the new building has three levels above ground and an underground one.The relations with the context and with the existing part of the association hall building are solved thanks to slight the relationship of the relation of tarticulations and partial offsets of the original solid: the west faça defolds above the ground floor glazed curtain,facing the access road to the site; the south faça defolds in the lower part to find an alignment with the entranceto the association hall; the north façade has a fold on all levels to reach the alignment with the volume of the association hall.

PIZZIGONI SCHOOL COMPLEX AND URBAN RENOVATION

Milan (Italy) location: client: Town of Milan

Sinergo Spa (engineering) consultants:

gross surface: 5 680sqm

12,6M € excl. VAT (11,8M school; 800K urban renovation) cost:

international competition phase:

timetable: 07.2019-09.2019

The new Pizzigon is chool complex shows itself with a strong identity, under lining the need for a school building the new Pizzigon is chool building the new Pizzigon is choosed by the new Pizzigon is choorenewed model within the urban, cultural and social structure of Villapizzone.

The aim is to create a unitary and aggregative place that could become a new urban centrality.

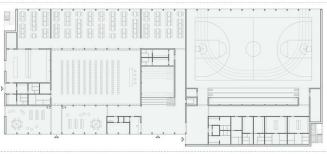

Since the beginning the project has been turned toward the coexistence of all the functional area in a single, compact building, to increase its identity and reduce its impact on the site.

The positioning of the new linear volume redefines and sets the external spaces, both publics or exclusives. Theredesigned compound becomes a focus point for the community and the convergence of an articulated series of pedestrian and cycle paths that connect all parts of the school campus.

The simple and sharp volume of the new school becomes a land mark, both from via Pizzigoni and from via Fermion and the properties of thrario Grugnola and, further, from via le Console Marcello. At the same time, the precise positioning of the new properties of the control obuilding creates an 'urban backdrop' between the urban space and the recreational one.

The design idea has been translated into a spatial sequence that marks the landscape in which the building stands.The building horizontal development, its great transparency and permeability, the presence of external balconies and the building horizontal development of the building horizontal development of the building horizontal development.turning all around-aremind of a traditional typological element-all under line the new school value, called to the contraction of the contractiofunction as a social incubator.

MARIO LODI SCHOOL COMPLEX

Matelica (Italy) location:

client: Comune di Matelica (MC)

Woodcape (X-Lam structure); Incide engineering (structure and engineering); Muner ingegneria (HVAC engineer); consultants:

internoesterno (visuals); Galliano Gallo (graphic design)

3 620sqm gross surface: importo opere: 3,9M € excl. VAT feasibility study phase: timetable: 04.2019-10.2019 2nd prize awards:

The new school layout makes it a visual reference point, both from Via Rossini and Via Marconi, but at the same and the resulting of the resulting point of the resulting points of the resulting potime, makes it an «urban curtain» between the civic space and the recreational one.

The concept translates, thanks to this dual nature, into an order sequence that articulates the landscape in which the concept translates are the concept translates. The concept translates are the concept translates are the concept translates are the concept translates. The concept translates are the concept translates are the concept translates are the concept translates. The concept translates are the concept translates are the concept translates are the concept translates are the concept translates. The concept translates are the concept translates are the concept translates are the concept translates are the concept translates. The concept translates are the concept translates arethe building stands. The repetition of a basic module measures and resizes the impact of the volume. Only exceptions of the volume and the property of the volume and thetions to this rule are the head corner, towards via Rossini, where the auditorium and the gymnasium are located, and the results of the resand the raised appendix covering the existing prefabricated volume, harmonizing it with the new building. The result is a school that interact with the fragmented surrounding urban context and with the redesigned recreations and the result is a school that in the redesigned recreation of the result is a school that in the redesigned recreation of the result is a school that in the redesigned recreation of the result is a school that in the redesigned recreation of the result is a school that in the redesigned recreation of the result is a school that in the redesigned recreation of the result is a school that in the redesigned recreation of the result is a school that in the redesigned recreation of the redesigned recreational garden.

The main entrance, located on the north-west front along Piazzetta Spontini, accentuates the civic character of the main entrance. The main entrance is a constant of the main entrance of the main entrance is a constant of the main entrance. The main entrance is a constant of the main entrance is a constant of the main entrance is a constant of the main entrance. The main entrance is a constant of the main entrance is a constant of the main entrance is a constant of the main entrance. The main entrance is a constant of the main entrance is a constant of the main entrance is a constant of the main entrance. The main entrance is a constant of the main entrance is a constantthis urban space. The existing road section has been modified, integrating it into a sequence of zones serving the action of the property ofschool and more over the entire community. This open-air space becomes the occasion to create a physical link between the new school and the neighborhood, offering different areas for the various functional needs of this areas for the various functional needs of this property of the various function of thinstitutional building.

The volume of the new building declares its dual nature: on one side the northelevation with its urban, almost the volume of the new building declares its dual nature; on one side the northelevation with its urban, almost the volume of the new building declares its dual nature; on one side the northelevation with its urban, almost the volume of the new building declares its dual nature; on one side the northelevation with its urban, almost the volume of the new building declares its dual nature; on one side the northelevation with its urban, almost the new building declares its dual nature; on one side the northelevation with its urban, almost the new building declares its dual nature.monolithic, character that dialogues with the main square; on the other the west elevation, generously open on the contraction of the contractiothe Apennine ridges.

More in detail if the north façade, which stands on the main town square, is a ligned with the adjacent residential and the stands of the stbuilding, the west one appears as leading actor, attesting on it all the main spaces of the new school.

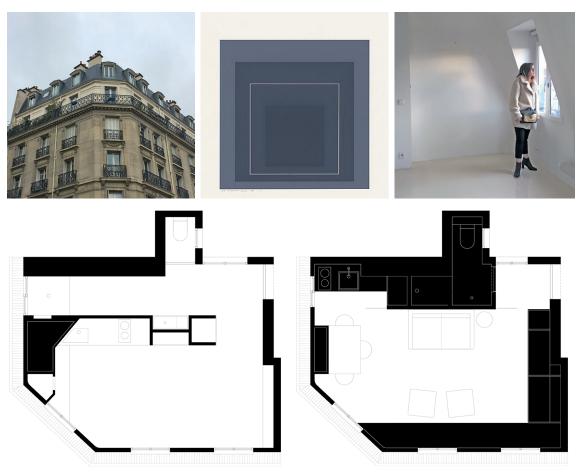

The contact between the two faca desis represented by the corner, emptied on the ground floor to house agenerative of the contact between the two faca desis represented by the corner, emptied on the ground floor to house agenerative or the contact between the two faca desis represented by the corner, emptied on the ground floor to house agenerative or the corner of the cornerous entrance por ch; dematerialized on the upper floors where the rear eall the spaces dedicated to professors, to the content of the conteparents' reception and to a double-height library. The different empty-full treatment of the two elevations and the parents' reception and the double-height library. The different empty-full treatment of the two elevations and the parents' reception and the parecorner reinforces the will of an innovative school building which, at the same time, dialogues with the surrounding the same time, and the surrounding time to the same time, and the surrounding time time to the same time, and the surrounding time time time time time.urban contest in which it is inserted.

APARTMENT RENOVATION

Paris (France) location: client: private gross surface: 40sqm 60K € excl. VAT cost: completed phase: design timetable: 01.2019-10.2019 worksite timetable: 11.2019-03.2020

CARRACCI SCHOOL COMPLEX

Bologna (Italy) location: client: Town of Bologna

consultants: Sinergo Spa (engineering); internoesterno (visuals)

gross surface: 4 000sqm 4,8M € excl. VAT cost: feasibility study phase: 11.2018-04.2019 timetable: awards: 3rd prize

The architectural concept for the new Carracci school complex is strongly linked to the urban and or ographicnature of the site. The building show itself as an architecture of the city in serted in a hilly lands cape: a simple volumetric organization into a complex context, consisting of multiple relationships between elements that, at different the context of the conscales, contribute to the narration of this place.

This is the reason why the new volume stands out as a visual reference point, both from via Felice Battaglia and via the reason why the new volume stands out as a visual reference point, both from via Felice Battaglia and via the reason why the new volume stands out as a visual reference point, both from via Felice Battaglia and via the reason why the new volume stands out as a visual reference point, both from via Felice Battaglia and via the reason why the new volume stands out as a visual reference point, both from via Felice Battaglia and via the reason why the new volume stands out as a visual reference point, both from via Felice Battaglia and via the reason which is ththe inside towards the surrounding landscape.

The idea is translated, thanks to this dual nature, into the intersection of two axes designing the common spaces and the intersection of two axes designing the common spaces.of the school: the north-southur banaxis, which crosses the building to exit towards the outer space; the east-west towards the outer space; the east-west towards the outer space and the school of the school oflandscape axis, which visually connects via di Ravone and the Dotti playground in front of the hill upstream. Along the first axis, the compactness of the building and the access poarch excavated in the volume create, $through a sequence of approaches, a space where the school environment becomes {\it civic}, a place of relation-to-school}$ ships, exchange and enrichment not only for the students, but for the whole local community.

These condaxis is the observation one, in which the ascending agorà-atrium-court-hill sequence runs along the profile of the terrain, opening glimpses into the surrounding nature and towards the sky.

international competition phase:

timetable: 03.2018-06.2018

The competition are a is located in a central position between the historic center of Los Molinos and the Doctor production of the competition oRodriguezPadillapark, along Calle Real. The recent residential-commercial expansion of this important artery requires a complete rethinking of this complex. Although this area is already important for the social life of the account of the complex ocommunity, however its spatial configuration makes it separate from the urban axis on which it is attested. Rethinking the spaces of the former "Divino Maestro" College becomes an important opportunity to give the account of the context of the contownofLosMolinosanewcentralareathatwillbecomeacommunityreferencepoint.Infact,themixofexisting ENGINE» capable of revitalizing the social life of the entire community. The large open court of the complex object of competition is now aday a group of fragmented areas, both from a functional and spatial point of view.The result is a nunexploited space without any connection to the city. Our proposal moves starting from the same and the context of the conmorphology of the complex. The strength of this area is represented by its strong socio-cultural vocation, considerations and the complex of the complex oering that the module A, which housed the "Divino Maestro" College, is also available for new functions. Starting from the sepremises, the accommodation of the public spaces of the new Los Molinos cultural center is a constant of the public spaces of the new Los Molinos cultural center is a constant of the public spaces of the new Los Molinos cultural center is a constant of the public spaces of the new Los Molinos cultural center is a constant of the public spaces of the new Los Molinos cultural center is a constant of the public spaces of the new Los Molinos cultural center is a constant of the public spaces of the new Los Molinos cultural center is a constant of the public spaces of the new Los Molinos cultural center is a constant of the public spaces of the new Los Molinos cultural center is a constant of the public spaces of the new Los Molinos cultural center is a constant of the public spaces of the new Los Molinos cultural center is a constant of the public spaces of the new Los Molinos cultural center is a constant of the public spaces.configured as the union of two urban areas: one peripheral (PERISTILIO), the other central (AGORA').

CAPPELLE MEDICEE MUSEUM BOOKSHOP AND FACILITIES

Florence (Italiy) location:

client: MIBACT (Ministero dei Beni e delle Attività Culturali e del Turismo)

consultants: Sannini Impruneta

320sqm gross surface:

540K € excl. VAT cost: phase: competition 11.2017-02.2018 timetable:

The urban context of the new "Cappelle Medicee" museum's exit is characterized as the residual space of an important historical complex. This is the area of via Cantodei Nellibet we en the volume of the "Sacrestia Nuova" in the context of the conand the octagonal one of the "Cappella dei Principi". An area which has almost a triangular shape and in which also in sist other minor elements, such as the ancient wall orthogonal to the volume of the "Sacrestia Nuova" and, also in sist of the volume of the "Sacrestia Nuova" and, also in sist of the volume of the "Sacrestia Nuova" and, also in sist of the volume of the "Sacrestia Nuova" and, also in sist of the volume of the "Sacrestia Nuova" and, also in sist of the volume of the "Sacrestia Nuova" and, also in sist of the volume of the "Sacrestia Nuova" and, also in sist of the volume of the "Sacrestia Nuova" and, also in sist of the volume of the "Sacrestia Nuova" and, also in sist of the volume of the "Sacrestia Nuova" and, also in sist of the volume of the "Sacrestia Nuova" and, also in sist of the volume of the "Sacrestia Nuova" and, also in sist of the volume onext to it, the most recent elevator block clad in Corten steel sheets.

The idea of the project is to stitch together these architectural elements giving to the whole area a more uniform the idea of the project is to stitch together these architectural elements giving to the whole area a more uniform the idea of the project is to stitch together these architectural elements giving to the whole area and the project is to stitch together the search it is a single project in the project is the project in the project is the project in theimage. To do this a continuous band creates a double external/internal front which, embracing the volume of the continuous band creates a double external front which, embracing the volume of the continuous band creates a double external front which, embracing the volume of the continuous band creates a double external front which, embracing the volume of the continuous band creates a double external front which, embracing the volume of the continuous band creates a double external front which, embracing the volume of the continuous band creates a double external front which, embracing the volume of the continuous band creates a double external front which, embracing the volume of the continuous band creates a double external front which, embracing the volume of the continuous band creates a double external front which, embracing the continuous band creates a double external front which is a double external frthe elevator, mitigating the presence of the wall spur, wrapping the museum new exit volume, becomes the new the elevator of the presence of the wall spur, wrapping the museum new exit volume, becomes the new theorem and the presence of the wall spur, wrapping the museum new exit volume, becomes the new theorem and the presence of the wall spur, wrapping the museum new exit volume, becomes the new theorem and the presence of the wall spur, wrapping the museum new exit volume, becomes the new theorem and the presence of the presence oflimit of the space.

As a fabric is formed by a weft and a warp, so the supporting structure of this band consists of 250x25 mm steel and a warp of the supporting structure of this band consists of 250x25 mm steel and a warp of the supporting structure of this band consists of 250x25 mm steel and a warp of the supporting structure of the supporting structure of the support of the suflat profiles placed at a distance of 600 mm; two horizontal profiles close the structure up and down. Between the contraction of the contractiovertical uprights are placed, from time to time offset, 570x170x50 mm terracotta tiles, fixed by means of square and the properties of tsection profiles passing through the tile holes. The design of this perforate denote appears as a strong and discreetpresence, becoming at the same time physical limit and visual filter.

APARTMENT RENOVATION

Zafferana Etnea (Italy) location:

client: private

Di Mauro Arredamenti consultants:

gross surface: 80sqm

47K € excl. VAT cost: completed phase: 09.2017-01.2018 design timetable: worksite timetable: 02.2018-06.2018

The apartment object of this project is located at the third and last floor of a building built in the early 80s in via a constant of the project of the pRoma in Zafferana Etnea. The apartment has a gross surface of 80 sqm and it has a distribution of the rooms around the central staircase. All the rooms are arranged, in this way, around this central core. The orientation of $the apartment is {\tt East-West.Two largeter races extend the view supstream towards {\tt ViaRoma} and, in the distance, {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution} and {\tt Constitution} are {\tt Constitution} and {\tt Constitution}$ MountEtna, downstream towards an exclusive garden and, on the horizon, towards the sea. STONE-CITY HEADQUARTER

Zandobbio (Italy) location: client: Granulati Zandobbio s.p.a.

 $Studio Associato Breda Patrizi Zandon\`a (engineering); Studio Barensi (renewable energies); Luca Rostellato (visual)$ consultants:

gross surface: 1 200sgm 2,8M € excl. VAT cost:

phase: international competition

04.2017-06.2017 timetable:

Considering the composition, the new multipurpose building for Granulati Z and obbio is strictly connected whit the property of the contraction of the contractioncontext, while affirming its formal autonomy of "landmark".

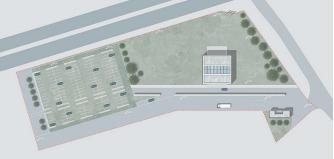

The volume, externally compact, monolithic and shiny, inside has a completely different value. The idea rises from the volume of the value of thethe Venetian palaces on the Canal Grande, with rooms and services on the two side and the huge living space in the Venetian palaces on the Canal Grande, with rooms and services on the two sides and the huge living space in the Venetian palaces on the Canal Grande, with rooms and services on the two sides and the huge living space in the Venetian palaces on the Canal Grande, with rooms and services on the two sides and the huge living space in the Venetian palaces on the Canal Grande, with rooms and services of the Canal Grande, with rooms and the Canal Grathe central part. More recently, the reference can be found in Louis I. Kahnarchitectures, typologically characterized by the dichotomy of «serving-served spaces».

The ground floor accommodates the huge hall for 300 persons, the building core.

All other floor are as over look the hall and, thanks to the triple height, even those of the upper levels. On the roof, and the roof of the upper levels of the upper levels of the upper levels of the upper levels. On the roof, and the upper levels of the upper levels of the upper levels. On the roof, and the upper levels of the upper levels of the upper levels. On the roof, and the upper levels of the upper levels of the upper levels. On the roof, and the upper levels of the upper levels of the upper levels of the upper levels. On the roof, and the upper levels of the upper levels of the upper levels of the upper levels. On the upper levels of the upper levels. On the upper levels of the upperin corrispondence of the central void, a glazed structure guarantees an optimal level of natural en light ment and a superior of the central void, and the contral void, and tventilation at all levels.

The quardian's facilities and accommodation are located in a small independent block strategically positioned and the properties of thenear the entrance to the site.

STUDENT HOUSING IN THE COLLEGIO DI MILANO UNIVERSITY CAMPUS

Milan (Italy) location:

client: Collegio delle Università Milanesi Foundation

Wood Cape (X-LAM structure); Studio Associato Breda Patrizi Zandonà (concrete structure and services) consultants:

gross surface: 1 100sgm 3,2M € excl. VAT cost: phase: schematic design 04.2015-07.2016 timetable:

In the context of the campus «Collegio di Milano», nowadays characterized by the presence of two stand-alone and the context of the campus and the campusblocks placed in a wide greenery, we were asked to design a third building, to expand the accommodation capacity.

the one hand, the research around the spatial value of former Lombard farmhouses, lead us to shape a lowered of the contract of the contractbasement. On the other hand, the design uses a local typological element, like the open-air gallery, which promote the contraction of the contravides for the presence, at each floor, of housing units sharing the same balcony.

The new building, with these premises, has been composed as the superposition of two parts: an articulated base-new building, with these premises, has been composed as the superposition of two parts: an articulated base-new building, with the separation of two parts: an articulated base-new building, with the separation of two parts: an articulated base-new building, with the separation of two parts: an articulated base-new building, with the separation of two parts: an articulated base-new building and the superposition of two parts: an articulated base-new building and the superposition of two parts: an articulated base-new building and the superposition of two parts: an articulated base-new building and the superposition of two parts: an articulated base-new building and the superposition of two parts: an articulated base-new building and the superposition of two parts: an articulated base-new building and the superposition of the superposition of the superposition of two parts: an articulated base-new building and the superposition of two parts: an articulated base-new building and the superposition of the superposition of the superposition of two parts: an articulated base-new building and the superposition of the superposition of two parts: an articulated base-new building and the superposition of the sment that fills the height difference of the site and hosts community facilities; a linear superposed block, 4 floors and 100 floors are sited as a finite of the site of thheight, hosting 52 single bedrooms served by open-airgalleries. Both of these parts, thanks to their geometry and the single bedrooms served by open-airgalleries and the single bedrooms served by open-airgalleries. Both of these parts, thanks to their geometry and the single bedrooms served by open-airgalleries. Both of the second of the single bedrooms served by open-airgalleries and the single bedrooms served by open-airgalleries. Both of the second of the single bedrooms served by open-airgalleries and the single bedrooms served by open-airgalleries. Both of the second of the single bedrooms served by open-airgalleries and the single bedrooms of the singletheir function, overlook an open lowered courtyard, covered with grass.

This composition, simple but efficient, will facilitate the active participation of resident students in the community of t $in which they will live in, so that they will easily become {\it ``citizen-users''}, exploiting the urban values of the new in which they will live in, so that they will easily become {\it ``citizen-users''}, exploiting the urban values of the new in which they will live in, so that they will easily become {\it ``citizen-users''}, exploiting the urban values of the new in the properties of the properties of the properties of the new in the properties of the properties of the new in the properties of the new in the properties of the properties of the new in the new$ complex and enjoying the offered facilities.

APARTMENT RENOVATION

Rome (Italy) location: client: private

Coin Arredamenti consultants:

gross surface: 130sqm

120K € excl. VAT cost: phase: completed 05.2016-01.2017 design timetable: worksite timetable: 02.2017-07.2017

This apartment is located at the 4th floor in a residential building built in the 50's.

In side, the flat is typically organized with a linear distribution of the rooms, all accessible from a wide, long correct on the rooms of the rooridor. The main sun orientation is North side, except the living zone and the kitchen, orientated at West and East.The concept, talking about the refurbishment, has been to preserve the identity of the apartment, both for volumes and the concept of the preserve the identity of the apartment, both for volumes are the concept, talking about the refurbishment, has been to preserve the identity of the apartment, both for volumes are the concept, talking about the refurbishment and the concept and the coand for the zone or ganization. This approach bring us to give an appropriate mood to all the spaces but, most of the properties of theall, to empathize the real back-bone of the flat: the long corridor.

In this direction, the full height fixed furniture leaning and giving rhythm to this space, has been conceived to transform the corridor from a serving to a served space. Not any more just a transit area, but a comfort zone connecting the living area to the kitchen.

gross surface: 6 350sqm (nursing home); 1 050sqm (community centre, retails); 600sqm (residential units)

18,0M € excl. VAT cost:

international competition phase:

timetable: 06.2015-09.2015

The question is: how can an ursing home for the elderly better engage with people from different generations and the properties of the pthe local community stakeholders in order to increase the enthusiasm and the co-creation?

The idea of this project is to use co-creation as a work method, including all stakeholders and surrounding town the idea of the project is to use the contract of the project is to use the contract of the project is to use the project is the project is to use the project is to use the project is the project is to use the project is the projeand community in the work process, in order to give the inhabitants of the new nursing home a dignified life with the community of the commumeaning and value.

The new intergeneration alnurs in ghome is located in an environment of mainly public facilities in the urbanized of the content of the conarea between via Mola and Coldrerio sport fields.

Formally, the proposed volume is recognizable by its division into two different parts: the basement, which is in direct relation with the topography, and the compact volume above, which claims its functional autonomy. This difference has been underlined by the choice of two materials: concrete for the basement, local stone clades and the contract of the coding for the volume above and the isolated block beside. The pattern of the faca deshighlights this two materials:more generous and full height openings in the basement; smaller and staggered openings in the volume above.

06.2013-10.2013 timetable:

Project is sues are simple but very clear: the new buildings must not be come apark boundary but blend with him.The effort was to organize in the best way the access, the routes, the pathways and all functions into a coherent and the pathway and all functions into a coherent pathway and all functions in the pathway and all functions in thewhole with the principles of the proposal. Access to the new school complex have all been positioned on the short of the proposal and the proposal access to the new school complex have all been positioned on the short of the proposal access to the new school complex have all been positioned on the short of the proposal access to the new school complex have all been positioned on the short of the proposal access to the new school complex have all been positioned on the short of the proposal access to the new school complex have all been positioned on the short of the proposal access to the new school complex have all been positioned on the short of the proposal access to the propsides of the new building, so as not to give a hierarchy to the facades and, at the same time, to emphasize the importance of the green corridors passing through.

Space needs have been grouped by functional entities and find their best location within this architectural mechanisms of the contraction of theanism. This organization is translated in some independent blocks that are within a unit volume: administration, local teachers, kinder garten and school cafeter ia on the ground floor; special classes on the first floor; library and the contraction of themultipurpose room on the second floor of the main building.

Away, but completely integrated into the park, the two volumes containing sport facilities function differently: the account of the park of the parkground floor is dedicated just to the entrance lobbies that over look two large empty halls-the gymnasium and the local content of the contswimming-pool one. Locker-rooms and service areas have been placed at the underground level up to minimize the content of ththe size of the two volumes above.

The project wants to be a real signal. The signal of an institutional presence in the same range of activities that the activities of the project wants to be a real signal. The signal of a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project wants to be a real signal of the project with the project wants to be a real signal of the project wants the project wants to be a real signal of tparcel just along the route RC1.

Aniconic building, very recognizable, which marks the site specificities and increase sits institutional character, is carefully layed to facilitate the visual relationship with the lake and, at the same time, to make visible the south of the latest and the latest and the latest are the latest are the latest and the latest are taccess to the neighbouring buildings.

Minimize on one hand the basement while fostering relationships and pedestrian walk ways between buildings, and the basement while fostering relationships and pedestrian walk ways between buildings, and the basement while fostering relationships and pedestrian walk ways between buildings, and the basement while fostering relationships and pedestrian walk ways between buildings, and the basement was also between buildings, and the basement while fostering relationships and pedestrian walk ways between buildings, and the basement was also between buildings, and the basement was also between buildings and the basement was also betwand maximize, on the other, the façade facing the route RC1.

In the same direction, the future extension of the Internef building takes shape as an extension of the other building takes shape as an extension of the other building takes and the other building takes are the other building takes and the other building takes are the other building takes and the other building takes are the other building takes and the other building takes are the oings in this part of the campus, although formally coherent with the faca detreatment of the cluster main building.The strategy used for the project is the same that has been exploited for the design of exterior are as that doesn't a strategy used for the project is the same that has been exploited for the design of exterior are as that doesn't are the same that has been exploited for the design of exterior are as that doesn't are the same that has been exploited for the design of exterior are as that doesn't are the same that has been exploited for the design of exterior are as that doesn't are the same that has been exploited for the design of exterior are as that doesn't are the same that has been exploited for the design of exterior are as that doesn't are the same that has been exploited for the design of exterior are as that doesn't are the same that has been exploited for the design of exterior are as the same that doesn't are the same that doesn't are the same that doesn't are the same that the same that doesn't are that doesn't are the same tas pire to play a leading role in side the project, but rather to integrate the surrounding landscape, characterized and provide the project of the projecby huge green surfaces and the curved design of the pathways, except for the trees alley leading to the lake.

PRIMARY SCHOOL WITH GYMNASIUM AND RECREATION FACILITIES

Versegères (Switzerland) location: client: Valais region; Town of Bagnes

4 200sqm gross surface: 10,0M € excl. VAT cost: international competition phase:

timetable: 02.2013-06.2013

 $The new primary school in Verse g\`erestakes place in the center of the plot, in a simple way, trying to give a strong place in the center of the plot, in a simple way, trying to give a strong place in the center of the plot, in a simple way, trying to give a strong place in the center of the plot, in a simple way, trying to give a strong place in the center of the plot, in a simple way, trying to give a strong place in the center of the plot, in a simple way, trying to give a strong place in the center of the plot, in a simple way, trying to give a strong place in the center of the plot, in a simple way, trying to give a strong place in the center of the plot, in a simple way, trying to give a strong place in the center of the plot, in a simple way, trying to give a strong place in the center of the plot, in a simple way, trying to give a strong place in the center of the plot, in a simple way, trying to give a strong place in the center of the plot of the center of the plot of the center of the plot of the place in the center of the plot of the center of the plot of the center of the cent$ identity to this part of the village.

The choice to let the buildings backfrom the main road becomes the real backbone of an architectural strategy for the choice of the buildings backfrom the main road becomes the real backbone of an architectural strategy for the buildings backfrom the main road becomes the real backbone of an architectural strategy for the buildings backfrom the buildings backfroma new sequence of public spaces and up to clarify pathways and driveways.

The idea has been translated in a very compact volume, also taking into account the shape and topography of the idea has been translated in a very compact volume, also taking into account the shape and topography of the idea has been translated in a very compact volume, also taking into account the shape and topography of the idea has been translated in a very compact volume, also taking into account the shape and topography of the idea has been translated in a very compact volume, also taking into account the shape and topography of the idea has been translated in a very compact volume, also taking into account the shape and topography of the idea has been translated in a very compact volume.the plot. To do this the functional program has been organized into two parallel volumes layed on a commonbasement. Between this basement and the upper floors, a filter-floor connects the interior spaces with the external property of the connects of the connectsplay grounds, remembering the void between the stone basement and the upper wooden structure very common andin the traditional barns of the Valais region.

Starting from the main road a linear pathway connects the new facilities and even the existing school building,preserved to aloud the creation of additional spaces for the local community.

Main functions, such as the class rooms and service spaces has been separated into two volumes in order to have a constant of the contract othe best flow organization and thus allow construction of the new school complex in two or, eventually, three discounties the contraction of the new school complex in two or, eventually, three discounties that the contraction of the new school complex in two or, eventually, three discounties that the contraction of the new school complex in two or, eventually, three discounties that the contraction of the new school complex in two or, eventually, three discounties that the new school complex in two or, eventually, three discounties that the new school complex in two or, eventually, three discounties that the new school complex in two or, eventually, three discounties that the new school complex in two or, eventually, three discounties that the new school complex in two or, eventually, three discounties that the new school complex in the new school complex in the new school complex in the new school contraction of the newphases.

SPECIALIZING SECONDARY SCHOOL WITH GYMNASIUMS

Riaz (Switzerland) location: client: LA GRUYERE Association

gross surface: 15 000sqm 32,4M € excl. VAT cost:

international competition phase:

timetable: 11.2012-03.2013

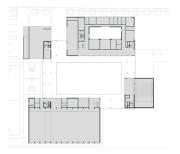

The third specializing school in the Gruyère region finds place at the north entrance to Riaz, in the Fribourg countryside. The project provides: 58 class rooms, 2 gymnasiums, an assembly hall and a refectory, distribute in different blocks or ganized around an exterior recreative space. This space becomes the project main actor. His space becomes the project main actor. Hisboundaries are fixed by the classroom volume.

The entire composition wants to express a double concept: freedom, given by the basement blocks and order, and the concept of the concept osignified by the annular class room volume that, thanks to his geometrical purity, becomes a sign of the new commercial purity and the commercial purity of the the commerplex for those who arrive by car or by bike.

For the same reason, the building scale as like as the dimension of certain elements like window frames are justified in the property of thefied referring to the wide agricultural landscape.

Even more, the insertion of the new school complex in the site is underlined by its materials: the sandblast of coloured concrete surfaces let appear calcareous pebbles. This porosity gives to the buildings a certain rough and the surface of the coloured concrete surfaces are the coloured concrete surfaces and the coloured concrete surfaces are the coloured colouredand rural appareance, in contrast with the reflecting precision of the aluminium window frames.

A rich relation between the fuctional blocks and their interaction with the huge external courty ard contribute to the function of the functreach favourable learning and exchange conditions.

PRIMARY SCHOOL WITH NURSERY AND PUBLIC SWIMMING-POOL

Cossonay (Switzerland) location: client: **ASICOPE** Association

SWITCH Ingénierie (services and renewable energies) consultants:

gross surface: 3 900sqm 10,0M € excl. VAT cost:

international competition phase:

timetable: 06.2012-09.2012

The new primary school in Cosson a yis located in the south-east corner of the site. The swimming-pool, on the term of the primary school in Cosson and the south-east corner of the site. The swimming-pool, on the supplies that the supplies the supplies the supplies that the supplies the supplies the supplies that the supplies that the supplies the supplies that the sucontrary, rather near the road and parking lot, up to emphasize its public role.

Auxiliary functions are positioned in a way to create an open court yard toward the expansion are as foreseen in the country of the countrythe PPA rules. Recognizable as one single entity with a simple volume, the new public facility buildings give an account of the property ofidentity to this site that could be a central place for Cossonay village.

The new complex, with its covered courty ards, faces a huge square serving as student's play ground as well as the new complex is a square serving as student's play ground as well as the new complex is a square serving as student's play ground as well as the new complex is a square serving as student's play ground as well as the new complex is a square serving as student's play ground as well as the new complex is a square serving as student's play ground as well as the new complex is a square serving as student's play ground as well as the new complex is a square serving as student's play ground as well as the new complex is a square serving as student's play ground as well as the new complex is a square serving as the new complex is a square seragathering place for Cosson ay citizens. In the west partal and scaped parking becomes the gateway to the bigpublic square. The swimming-pool is the first facility we meet, leaned at a slightly higher altitude besides other public square. The swimming-pool is the first facility we meet, leaned at a slightly higher altitude besides other public square. The swimming-pool is the first facility we meet, leaned at a slightly higher altitude besides other public square. The swimming-pool is the first facility we meet, leaned at a slightly higher altitude besides other public square. The swimming-pool is the first facility we meet, leaned at a slightly higher altitude besides other public square. The swimming-pool is the first facility we meet, leaned at a slightly higher altitude besides other public square. The swimming-pool is the first facility we meet, leaned at a slightly higher altitude besides other public square. The swimming-pool is the side of thebuildings. A small square with a covered bike parking, serves both main entrance to the swimming-pool, an expectation of the swimming of the property of the swimming of theternal access to the café and secondary access to the technical rooms. The simple volume containing auxiliaryfunctions (refectory, recreation centre, playroom, nursery, conciergerie) get us from the beginning to the end of the walk, passing through the small square, the large play ground square, till the new school covered court yard.The full height curtain wall that runs all along this building, as well as its green thick roof which overflows to protectthe pedestrian pathway on the south side and on the west side bike parking, emphasizes the role of the building.For this reason the glasses shall be rather reflectives and the rooftop very generously planted.

LOCAL FIRST-AID STATION

Civry (France) location:

client: Communauté de Communes des Plaines et Vallées Dunoises

SWITCH Ingénierie (services and renewable energies); CEB économistes (cost surveyor); LIRAAT (visuals) consultants:

gross surface: 170sqm

250K € excl. VAT cost: restricted competition phase: 05.2012-08.2012 timetable: awards: 2nd prize

The project for a first-aid station in Civry asserts itself with rigorand so briety into the Beauce region. This territory is a first project for a first project fois characterized by horizontal lines which fits and integrates withour proposal even though it keeps its autonomy.because of its very compact volume.

The new building is positioned parallel to the street to emphasize its institutional role. A discrete pedestrian path-institution and the street of the stway, centered on the entrance, provides a strong axis for the project through the building to frame the landscape and the project through the building to frame the landscape and the project through the building to frame the landscape and the project through the building to frame the landscape and the building to frame the building the building to frame the building to frame the building to frame the building the buildingat the other end. This way the sequence pathway-hall-waiting room becomes a kind of spyglass that encloses a sequence of the contraction of the property of the contraction of the conthe landscape and, at the same time, appeases the presence of the new building in an empty field.

The central space, facing the prevailing winds, allows for optimum ventilation. This space is the real backbone of the central space of the central space of the central space of the central space. The central space of the central space ofthe new building, which unites and symmetrically organizes the four main services: ambulatory, secretary's room, pharmacy and a break room with a small kitchen.

Four distribution niches, with a lower ceiling height, function as filter spaces between the public and the staffare as. If the interiors have been designed symmetrically, the elevations stand this logic, being one different from the content of the conthe other.

FICHES-NORD HOUSING SETTLEMENT WITH RETAIL SURFACES

Lausanne (Switzerland) location:

client: SILL (Lausanne Real Estate Company) SWITCH Ingénierie (renewable energies) consultants:

gross surface: 17 600sqm 45,0M € excl. VAT cost:

phase: international competition

03.2012-07.2012 timetable:

This project proposes the succession of 8 housing block supina hill in the northern part of Lausanne. The fronts of the support of the proposes the succession of 8 housing blocks up in a hill in the northern part of Lausanne. The fronts of the support of the proposes the succession of 8 housing blocks up in a hill in the northern part of Lausanne. The fronts of the support of the proposes the succession of 8 housing blocks up in a hill in the northern part of Lausanne. The fronts of the support of the supportthese buildings are aligned on the street to define a clear and dense elevation on which find place main entrances.A small pedestrians quare has been created at the end of the alley and of the street on which in sists some retails.Another public space dedicated to relax and free time, has been placed at the center of the four blocks in the south part of the site.

 $The apartments are organized en {\it ``rouedemoulin''} around a central stair case. Each flat has a double orientation;$ the living room revolves around the sleeping rooms and services and it is extended with an outdoor space information of the sleeping rooms and services and it is extended with an outdoor space information of the sleeping rooms and services and it is extended with an outdoor space information of the sleeping rooms and services and it is extended with an outdoor space information of the sleeping rooms and services and it is extended with an outdoor space information of the sleeping rooms and services and it is extended with an outdoor space information of the sleeping rooms and services and it is extended with an outdoor space information of the sleeping rooms and services and it is extended with an outdoor space information of the sleeping rooms and services and services and services are sleeping rooms are sleeping rooms and services are sleeping rooms are sleeping rooms. The sleeping rooms are sleeping rooms are sleeping rooms are sleeping rooms and services are sleeping rooms are sleeping rooms. The sleeping rooms are sleeping rooms are sleeping rooms are sleeping rooms are sleeping rooms. The sleeping rooms are sleeping rooms are sleeping rooms are sleeping roof a loggia.

A careful use of materials help stogive a strong identity to this housing settlement: greyrough plaster for current and the properties of the properties ofloors; local varnished wood cladding for the basement and the attic floor.

CARPENTER SCHOOL REFURBISHMENT AND EXTENSION

Catania (Italy) location:

client: ESEC; CPT; ANCE Catania

2 400sqm gross surface: cost: n.c.

restricted competition phase: timetable: 04.2012-05.2012

The goal of this project was the rehabilitation and the extension of the existing spaces of a professional carpenter.school in Catania.

The program plans to rethink spaces that, even if used, no longer meet the requirements and the needs of today's and the program plans to rethink spaces that, even if used, no longer meet the requirements and the needs of today's and the program plans to rethink spaces that, even if used, no longer meet the requirements and the needs of today's and the program plans to rethink spaces.students and have a big lack of functionality.

The design must provide four functional entities including: class rooms with a large outdoor area for practices, an account of the contraction oadministrative area, furnished accommodation for guests and a refectory open both to students and staff. After analyzing the quality of existing spaces our project provides, through small interventions on the existing property of the property ofbuildings, to precise the spatial localization of the functional entities.

Our proposal also provides to move the main entrance giving to it agree a tervisibility from the site access; a water to be a constant of the proposal and thbasin improves the institutional role of the new entrance volume.

Outdoor training spaces find their ideal position into the site, being directly connected to the classrooms. So lar panels mounted on brises-so leilon pole semphasize and reflect the maritime pine woods urrounding the account of the property of thesite, allowing hot water production all year long.

MULTI-FUNCTIONAL PAVILION

Catania (Italy) location:

client: Town of Catania; ANCE Catania

gross surface: 350sqm cost: n.c.

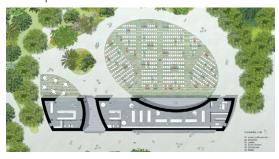

international competition phase:

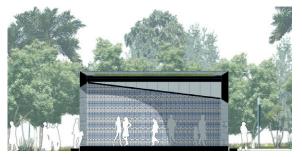

timetable: 11.2011-01.2012

Rethink this part of the Vincenzo Bellini public garden means to touch a tits historical memory, even if it is very a constant of the Vincenzo Bellini public garden means to touch a tits historical memory, even if it is very a constant of the Vincenzo Bellini public garden means to touch a tits historical memory, even if it is very a constant of the Vincenzo Bellini public garden means to touch a tits historical memory, even if it is very a constant of the Vincenzo Bellini public garden means to touch a tits historical memory, even if it is very a constant of the Vincenzo Bellini public garden means to touch a tits historical memory, even if it is very a constant of the Vincenzo Bellini public garden means to touch a tits historical memory, even if it is very a constant of the Vincenzo Bellini public garden means to touch a tits historical memory, even if it is very a constant of the Vincenzo Bellini public garden memory and tweak today. Its slow transformation from an ananthropic place to a non-place, in the sense given by Marc Augé, has radically changed this space, transforming it from centripetal to centrifugal.

The site is currently characterized by a large green fence in side which remains the footprint of the former Chinese Pavilion, a circular mono-centric space, even if nothing happens at its center. This brings to a complete confusion with a very difficult spatial relationship between the parts, beyond a lack of identity and a functional and the parts of tinadequacy of this place.

The thesis of our proposal is to give back an identity to this enple in airroom. The project arises from an extrusion.The extrusion of a chord of this circular space can immediately identify two clear limits: a passage zone, than known as the contract of theto the positioning of the chord itself, a place to stay and relax, a kind of multi-purpose space that denies the current of the purpose space of the contract of the property of the propertrent monocentrism rather to create a polycentric space. The tension between the limits reveals the chord, reams and the content of the contits thickness to let it become a filter space between the two areas. This filter block, the real project backbone, dialogues with the two limits that it identifies, unifies and separates at the same time. If at one side we wanted the same time of the same time.to put in evidence its horizontality, under lines by the presence of an long incision on the lava-stone wall, on the law of the presence of the law of topposite the polycentric nature is reflected on the façade, drawing openings and holes with different shapes and the polycentric nature is reflected on the façade, drawing openings and holes with different shapes.and depths.

LE CERCLE TEA-ROOM REFURBISHMENT

Paris-8° arrondissement (France) location:

client: private

consultants: CEB économistes (cost surveyor)

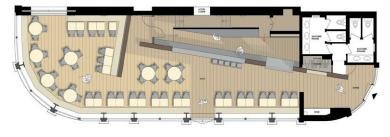

gross surface: 180sqm

210K € excl. VAT cost: phase: schematic design timetable: 12.2011-03.2012

The Ledoyen restaurant is a famous parisian establishment located in the Ledoyen square in side the Champs-located in the Ledoyen square in side the $\'{E} ly s\'{e} es gardens. The part of the restaurant which is the subject of this renovation project is located at the rear side of the restaurant which is the subject of this renovation project is located at the rear side of the restaurant which is the subject of this renovation project is located at the rear side of the restaurant which is the subject of this renovation project is located at the rear side of the restaurant which is the subject of this renovation project is located at the rear side of the restaurant which is the restaurant$ of the pavilion and is named Le Cercle.

The project aims to empty the existing volume in order to obtain a more spacious environment; the only built element will be a thick full-equipped wall separating the public area from the workspace.

At the ceiling, between the existing moldings, several white boxes will hang at different heights to separate and the ceiling of the ceilinunderline the various areas.

NURSERY SCHOOL WITH COMMUNITY CENTER

Lugano (Switzerland) location: client: Town of Lugano

AIIC Ingénierie (structure and services) consultants:

gross surface: 3 900sqm 9,5M € excl. VAT cost:

phase: international competition

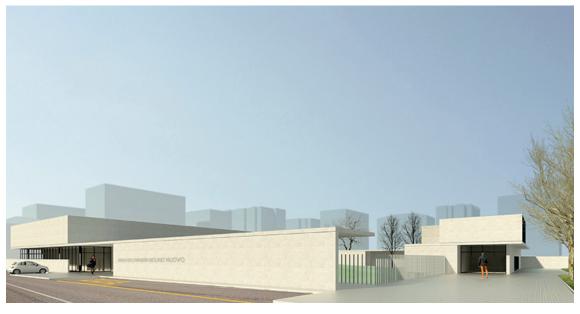

05.2011-10.2011 timetable:

In our project, the architectural intention is intimately tied to the choices in construction. This proposal has founded a construction of the choices in the choices in the construction of the choices in the choiceits concept after a deep urban analysis and an identification of the qualities of Molino Nuovo empty spaces. The design results then from a single pure wave: two main buildings with two levels, connected by two single levels are the properties of the properties opor ches. Trait d'union of the whole composition is its own roof top, which gives a dimension to the entire site and the composition of the compreplaces buildings to a human scale. The new complex in this way unifies, identifies and orders.

The building becames an inhabited fence for the green spaces and play grounds: volumes takes hape from empty and the properties of the pforms. Along via Giovanni Ferrithere is the fence d front of the complex, a ligned with the adjacent buildings. The advantage of the complex of the complevolume of the new Molino Nuovonur sery school is balanced by the long wall which support the entrance porch, and the contraction of the contractare alurban banner. The urban elevation is then reconstructed and the different scale with the surrounding building the surrounding building the different scale with the surrounding building the scale with the surrounding building buildingings denounces the social function of the new facility.

SERLACHIUS GOSTA MUSEUM EXTENSION

Mänttä (Finland) location:

client: SERLACHIUS GOSTA Foundation

gross surface: 3 000sqm 15,0M € excl. VAT cost: international competition phase:

timetable: 01.2011-04.2011

 $The proposal idea for the extension of the Serlachius G\"{o}sta Museum rises from the existing tree-lined pathway. By the proposal idea for the extension of the Serlachius G\"{o}sta Museum rises from the existing tree-lined pathway. By the proposal idea for the extension of the Serlachius G\"{o}sta Museum rises from the existing tree-lined pathway. By the proposal idea for the extension of the Serlachius G\"{o}sta Museum rises from the existing tree-lined pathway. By the proposal idea for the extension of the Serlachius G\"{o}sta Museum rises from the existing tree-lined pathway. By the proposal idea for the extension of the Serlachius G\"{o}sta Museum rises from the existing tree-lined pathway. By the proposal idea for the existing tree-lined pathway and the serial pathway$ creating an alignment with this pedestrian axis, the new building finds out is place in the beautiful site; at the same account of the property of the propetime this re-discovered direction, underlines the massive volume of the ancient manor.

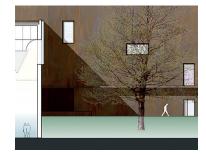

With the aim of providing both functional and muse ological qualities, the project proposes a new backbone,accompanying existing tree-lined pathway from the entrance to the banks of the lake. The monumental gallery establishes a close relation, both visual and physical, with the outdoor path.

 $All the functional entities of the Serlachius G\"{o}sta Museum extension depends on the gallery, kaleidos copic space$ that orientates visitors, links the public square to the lake and measure the site.

Startingandendingpoint of the gallery are the two most importants paces of the new building: on one side, towards the inland, the main entrance volume, marked by his massive expression is tfaçade; on the other side, lake-inland, the main entrance volume, marked by his massive expression is tfaçade; on the other side, lake-inland, the main entrance volume, marked by his massive expression is tfaçade; on the other side, lake-inland, the main entrance volume, marked by his massive expression is tfaçade; on the other side, lake-inland, the main entrance volume, marked by his massive expression is tfaçade; on the other side, lake-inland, the main entrance volume, marked by his massive expression is tfaçade; on the other side, lake-inland, the main entrance volume, marked by his massive expression is tfaçade; on the other side, lake-inland, the main entrance volume, and the other side, lake-inland, the other side, lake-inland,front, the travelling exhibition main hall, made out of the same material and imagine das an art of matter work.The general organization of the site is easily under standable by observing the Serlachius factory. Long tree-lined and the same properties of the same properpaths led to the manor estate area; all around, a series of satellite-buildings holding services and facilities. The surrounding natural landscape, made out of a pattern of thousands of islands connected to the main land, and the surrounding natural landscape, made out of a pattern of thousands of islands connected to the main land, and the surrounding natural landscape, made out of a pattern of thousands of islands connected to the main land, and the surrounding natural landscape, made out of a pattern of thousands of islands connected to the main land, and the surrounding natural landscape, made out of a pattern of thousands of islands connected to the main landscape, and the surrounding natural landscape, made out of a pattern of thousands of islands connected to the main landscape, and the surrounding natural landscreflects this organization.

EURE CHAMBER OF COMMERCE AND INDUSTRY HEADQUARTER

location: Evreux (France)

The rehabilitation project of the Rothschild Foundation provides are flection on the historical building structure as the resulting of the resulting property of the resultiwell as its functional complexity.

The complete reorganization of the ground floor with the redevelopment of public consulting areas, waiting areas and the complete reorganization of the ground floor with the redevelopment of public consulting areas, waiting areas are redevelopment of the public consulting areas. $and caf\'{e} on one hand; the reorganization and renovation of tertiary spaces on the other, are the two themes we are the contraction of the reorganization and renovation and renovation of the reorganization and renovation and renov$ have worked on.

PROFESSIONAL SCHOOL IN A FORMER MILITARY COMPOUND

Ivry sur Seine (France) location:

client: ECPAD (Etablissement de Communication et de Production Audiovisuelle de la Défense)

ERIB (cost surveyor); CAP-HORN solution (acoustic) consultants:

gross surface: 980sqm

1,07M € excl. VAT cost: restricted competition phase: timetable: 03.2011-07.2011 awards: 2nd prize

In every refurbishment design we're faced with a pre-existence. The aim of the project for a new training school in the project for a projecIvry is to highlight the pre-existence which is represented by the structure of the building itself.

An appropriate structure for a military building, which transmits an idea of for tress and gives throughout the corresponding to theridor its own metric, its tight and modular rhythm.

The soul of this building, which is located in a military area, according to the intentions of the project, should come and the project of the project ofout through the reading of its own structure.

The project does not want to hide, but it wants to highlight the real nature of the existing.

lows at one side to serve administrative areas and internal training, on the other class rooms and TV training set;secondary access, more private, which allows a direct access to a dministration of fices and training class rooms. $Divided by the {\it main}\, access, the project develops two {\it macro}\, areas: on the {\it left}\, the {\it administration}\, and {\it internal}\, and {\it left}\, the {\it main}\, access, the {\it project}\, develops two {\it macro}\, areas: on the {\it left}\, the {\it administration}\, and {\it internal}\, areas: {\it left}\, the {\it main}\, access, the {\it project}\, develops two {\it macro}\, areas: {\it onthe}\, access, the {\it project}\, develops two {\it macro}\, areas: {\it onthe}\, access, the {\it project}\, develops two {\it macro}\, areas: {\it onthe}\, access, the {\it project}\, develops two {\it macro}\, areas: {\it onthe}\, access, the {\it project}\, develops two {\it macro}\, areas: {\it onthe}\, access, the {\it project}\, access, the {\it project}\,$ training area; on the right teaching the technical area, including the great TV training set.

In the center there are some facilities, easily accessibles from any part of the school.

The real project backbone is represented by the wide central corridor, stated in different ways, depending on the contract of the contract ovariation of the service spaces which complete the base module.

DEPARTMENT BUILDING, AUDITORIUM AND UNIVERSITY LIBRARY

Vannes (France) location:

client: Town of Vannes; UBS (South-Britain University)

IOSIS Centre-Ouest (structure, services and renewable energies) consultants:

gross surface: 10 600sqm 17,2M € excl. VAT cost: phase: restricted competition 10.2009-02.2010 timetable:

The new department building for the Tohannic University Campus in Vanneshas been organized as a rectangular formula of the Control of the Crigorous and compact block which marks a substantial break with the formal heterogeneity of existing buildings.It is articulated around three generous courty ards which become the project main signature, both in a functional and the project main signature and the project main signature.and in a formal way. These huge court yards are places of relaxation and leisure but, at the same time, they offer a continuous coa quiet and ideal condition to learn.

They provide a real visual comfort as well as they are very important up to renewable energies (limited wind effects and therefore the heat loss associated with convection).

At the same time, solar gains are controlled because of the masking effects created by the façades.

The project morphology clearly expresses the functioning of the building and underlines the identity of the IFS land and the project morphology clearly expresses the functioning of the building and underlines the identity of the IFS land and the project morphology clearly expresses the functioning of the building and underlines the identity of the IFS land and the IFS land anUFR departments. The large monumental volume at the centre of the block wants to clarify the sharing of common and the contraction of the property of the prfacilities: the amphitheaters become the link between the set wo entities. The cantile ver of the amphitheaters volume creates a spectacular event to shape a majestic entrance to the new building.

JEWISH SYNAGOGUE WITH LIBRARY AND GUESTHOUSE

Potsdam (Germany) location:

client: Land Brandenburg; Potsdam Jewish Community

IOSIS Centre-Ouest (structure and services); LUXIGON (visuals) consultants:

gross surface: 4 800sqm 8,0M € excl. VAT cost: phase: restricted competition 02.2009-04.2009 timetable: awards: honourable mention

The genesis of the new synagogue for the Potsdam Jewish Community can be founded in the Jerusalem Wailing and the property of the Potsdam Jewish Community can be founded in the Jerusalem Wailing and the Potsdam Jewish Community can be founded in the Jerusalem Wailing and the Potsdam Jewish Community can be founded in the Jerusalem Wailing and the Potsdam Jewish Community can be founded in the Jerusalem Wailing and the Wailing and the Jerusalem Wailing anWall. Beyon dits extreme importance in the Jewishculture, the overall dimension scale of this master piece was a support of the Jewishculture. The overall dimension scale of this master piece was a support of the Jewishculture, the overall dimension scale of this master piece was a support of the Jewishculture. The overall dimension scale of this master piece was a support of the Jewishculture, the overall dimension scale of this master piece was a support of the Jewishculture. The overall dimension scale of this master piece was a support of the Jewishculture, the overall dimension scale of this master piece was a support of the Jewishculture. The overall dimension scale of this master piece was a support of the Jewishculture, the overall dimension scale of the Jewishculture. The overall dimension scale of the Jewishculture, thtaken as a guide reference for the design of the new worship complex.

On one hand the new building fits into the historical Pots damp rid with its neoclassical buildings by finding strictalignments with beside constructions; at the same time, the new architecture wants to assert and declare his pressure of the construction of theence and function especially by its own materials: a monolith stone volume with a shlars differently trated for size and the contraction of theand finishing. The transparents and translucents part of the façades are measured to maximize the use and comfort the factor of the factor oof interior spaces. Natural light, playing with the stone cladding, enhances the sacredness of the place.

RENAULT & NISSAN CAR ASSEMBLY PLANT

location: Melloussa (Morocco)

client: RENAULT Group; TANGER-MED Harbour Authority

ENIA architectes (architecture); IOSIS (engineering); ASSYSTEM (project management) consultants:

gross surface: 475 000sgm 750,0M € excl. VAT cost: completed phase: 10.2008-11.2009 design timetable: worksite timetable: 05.2010-08.2012

This industrial project, with a global investment of 1.1 billioneuros, plans to build a car assembly plant located on a plot of 314 hectares in Morocco. At the end, the new plant will be connected to the Tanger-Med harbour hub to the following the following the property of $be nefit of the advanced logistic infrastructures developed in northern Morocco, which will allow the {\tt Renault-Nis-periodic infrastructures} and {\tt Rena$ san alliance to have one of the largest industrial complexes in the mediterranean area.

This is the first zero-carbon carplant in the world and it will have zero industrial waste. Around 40 million euros and the contraction of the care allocated to reduce the environmental impact in the site.

Plant carbon emissions will be reduced by 98%, which will prevent the emission of nearly 135,000 tons of CO2 per year. This drastic decrease can be read firstly and foremost as the result of a study on energy demand and consumption at the sites cale as well as at the building sone. Indeed, efforts were concentrated on the painting and the sites of thesector which needs alone nearly 70% of the thermal energy of the entire plant. The use of innovative technologiesand be stpractices in terms of energy recovery will reduce the thermal needs of the plant by 35%. In terms of CO2emissions, they will be reduced by 100% thank to a biomass boiler system (CO2-neutral fuel). Water supplying the contraction of the contractionfor industrial processes will be reduced up to 70%, compared to a plant with an equivalent production rate.

The building its project wants to express its status integrating perfectly into the urban structure of the village. The building its project wants to express its status integrating perfectly into the urban structure of the village. The building its project wants to express its status integral in the urban structure of the village in the urban structure of the village in the urban structure of the urban shouses new classrooms and services for students and teachers and it occupies the upper part of a slope. The two parallel wings which compose the volumes are arranged in order to form two open courty ards: at one side two parallel wings which compose the volumes are arranged in order to form two open courty ards: at one side two parallel wings which compose the volumes are arranged in order to form two open courty ards: at one side two parallel wings which compose the volumes are arranged in order to form two open courty ards: at one side two parallel wings which compose the volumes are arranged in order to form two open courty ards: at one side two parallel wings which compose the volumes are arranged in order to form two open courty ards: at one side two parallel wings with the volume are also parallel wings with the voa smaller and private courty ard (dedicated to teachers and staff), on the other a much wider one (for students and staff) are considered to the contract of the contract ofrecreation and playtime).

On the opposite, the multi-functional hall has been designed as a compact monolithic volume, as piring to be a compact monolithic volume, as piring to bemark of a new centrality: that of the square between the hall itself and the existing school. This new square can be also be a constant of the square between the hall itself and the existing school. This new square can be a constant of the square between the hall itself and the existing school. This new square can be a constant of the square between the hall itself and the existing school. The square between the hall itself and the existing school is the square between the hall itself and the existing school. The square between the hall itself and the existing school is the square between the hall itself and the existing school is the square between the hall itself and the existing school is the square between the hall itself and the existing school is the square between the squaeasily accommodate events related to the program as well as to the needs of Avry community.

The faça detreatment emphasizes this difference between the two mainfunctions/volumes: if a wooden wire the factor of the fact $covers the new school, remembering typical barns scattered everywhere in the {\sf Canton of Fribourg}, at ranslucent$ polycarbonateskindressesthemulti-functionalhall, justtoletseethedifferentactivities inside of it without interfering, enlightening at the same time the surroundings and the public square.

ARAB-SOUTH AMERICAN LIBRARY

Zeralda (Algeria) location:

client: Algerian Ministry of Culture

STUDI Ingénierie (structure and services); IOSIS (project management); LUXIGON (visuals) consultants:

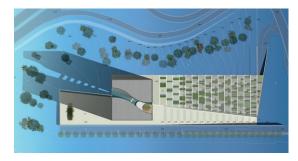

gross surface: 67 300sqm 109,0M € excl. VAT cost: phase: restricted competition 03.2008-06.2008 timetable: awards: honourable mention

The project for the Arab-South American new public library finds its origin in the desire to assert clearly, almost the project for the Arab-South American new public library finds its origin in the desire to assert clearly, almost the project for the Arab-South American new public library finds its origin in the desire to assert clearly, almost the project for the Arab-South American new public library finds its origin in the desire to assert clearly, almost the project for the Arab-South American new public library finds its origin in the desire to assert clearly, almost the project for the Arab-South American new public library finds its origin in the desire to assert clearly, almost the project for the Arab-South American new public library finds its origin in the desire to assert clearly, almost the project for the Arab-South American new public library finds its origin in the desired new public libraryliterally, the duality of the program: while it is composed by two entities (representing two cultures), the setwork of the program of theentities are closely connected, sharing a common basement of knowledge and history.

The geographic analogy of continental drift seems to be so strong and quite obvious.

Plate tecton ics explains their current form by this theory: at the origin the African and American continents formed the continents of the continents ofjust one land; they slowly split into two separate entities. However, both of them have retained in their shape, the properties of the pmemory of the other.

The project takes this beautiful image: two parts, each one representing a culture leaned on a common core, each of the project takes this beautiful image: two parts, each one representing a culture leaned on a common core, each of the project takes this beautiful image: two parts, each one representing a culture leaned on a common core, each of the project takes thehaving a shape that get married to the other one. In this way, the building is formed by a single volume for the first five floors, then it splits into two different towers facing each other till the rooftop.

DEH-SABZ SATELLITE TOWN MASTERPLAN

Kabul (Afghanistan) location: client: Afghan Government

AS-Architecture Studio (urban design); Composante Urbaine; Eaux de Paris; consultants:

Partenaires Développement; DEERNS (project management)

site surface: 40 000 hectares 5,0B € excl. VAT cost:

phase: masterplan and planning

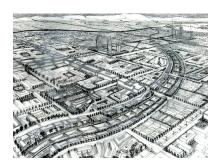

timetable: 05.2007-02.2008

This huge study includes a project for a new town that shall accommodate around 3 million of people on horizon and the contraction of the contra2030. The new town shall find place on the site of Deh-Sabz, very close to Kabul.

The construction of this new town will ensure access to the Kabulishealth and social facilities. In a second step, it is a construction of the cis planned the renovation of downtown Kabul.

Deh Sabz is a poly-centric town without a city center. The rigorous plan-which allows a clear mental representation of the contract of the ction of the city-is broken by natural ravines, in geniously lands cape dasurban parks, promenades, play groundsand gardens.

The challenge was to understand, beyond form, fundamental uses of Afghancities: the public-private relationship and the importance of ethnic families. The reis no concept of public space in Deh-Sabz, but the role of the bazaar and the importance of the reison of the bazaar and the importance of the role of the bazaar and the importance of the role of the bazaar and the importance of the role of the bazaar and the role of theis however very important. This constant relation between local and universal needs has helped the design, mostly introducing innovative and essential principles regard to the new town sustainable development, declined hereing the development of the developmmany aspects: environmental, economic, social and cultural. The main objective was to clearly show Deh-Sabzas the rebirth of Afghan is tan with a total respect for its culture and history. The town is organized around a huge a state of the respect of the respeccentral park with three fundamental poles; as ports centre, a cultural centre and a religious centre with the great central park with three fundamental poles; as ports centre, a cultural centre and a religious centre with the great central park with three fundamental poles; as ports centre, a cultural centre and a religious centre with the great central park with three fundamental poles; as ports centre, a cultural centre and a religious centre with the great centre with the grAit mosque. In its suburban zone the town is contained by a agricultural field band, existing and preserved.

LE DOMAINE DE CHARAINTRU NURSING HOME CARE

Savigny sur Orge (France) location: client: EHPAD Le Domaine de Charaintru

Naud & Poux (architecture); AIC Ingénierie (structure and services); Cabinet Cholley (cost surveyor) consultants:

gross surface: 7 300sqm 14,4M € excl. VAT cost: phase: completed 01.2008-04.2010 design timetable: worksite timetable: 06.2010-11.2012 1st prize awards:

The project, located in close proximity to the town, enjoys a strategic position.

The establishment feeds off this closeness which contributes to a higher standard of living for residents and employed the standard of the sployees. That 's why it was decided to take the existing parcel plan project in Savigny-sur-Orge as a blue print-to-ployees. That 's why it was decided to take the existing parcel plan project in Savigny-sur-Orge as a blue print-to-ployees. That 's why it was decided to take the existing parcel plan project in Savigny-sur-Orge as a blue print-to-plan project in Savigny-sur-Orgebuild an human scale environment where residents could be housed individually.

It is a smuch an urban as a social project. The old demolished building will become a leafy esplanade, on which the social project of the presidents can walk along, and around which lodges are spread in groups of two or three, thus making up the "village homes". The reception building, placed at its centre, will link up the two villages. This will be the only part in the property of the property ofof the building covered with a glazed surface, meanwhile the residential ones will have wooden framing.

KNIGHT FRANK FRANCE HEADQUARTER RENOVATION

Paris-1° arrondissement (France) location:

client: Knight Frank France

Naud & Poux (architecture); AIC Ingénierie (structure and services); Cabinet Cholley (cost surveyor) consultants:

gross surface: 220sqm

300K € excl. VAT cost: phase: completed 01.2007-04.2007 design timetable: worksite timetable: 05.2007-07.2007

 $Knight Frank has chosen to occupy the last floor of a building facing Place Vend\^{o}me in Paris. The company extended the property of the pr$ pressed the wish to receive clients in a light and fluent open-space, having the capacity to reflect the image of a light and the capacity to reflect the image of a light and the capacity to reflect the image of a light and the capacity to reflect the image of a light and the capacity to reflect the image of a light and the capacity to reflect the image of a light and the capacity to reflect the image of a light and the capacity to reflect the image of a light and the capacity to reflect the image of a light and the capacity to reflect the image of a light and the capacity to reflect the image of a light and the capacity to reflect the image of a light and the capacity to reflect the capacity the capacity the capacity to reflect the capacity the capayoung and dynamic brand.

Our design is based on two main principles: first purify the interior to provide a neutral background space, then the provided provided an extra provided provideddraw with a single gesture the curve that makes the interior space.

In spired by fashion designers and jewelers who in habit this famous parisian address, the Knight Franklog obeliance of the property of thecomes the pretext of a printed jacquard fabric stretched on both sides of the curved partition wall. The western printed jacquard fabric stretched on both sides of the curved partition wall. The western printed jacquard fabric stretched on both sides of the curved partition wall. OFFICE BUILDING

location: Lyon (France)

client: Town of Lyon; Societé du Grand Lyon

AS-Architecture Studio (architecture); Groupe Lazard; Groupe Quadri Plus; Eco Cites consultants:

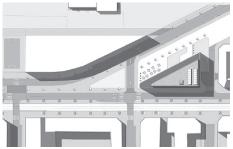

gross surface: 6 300sqm montant travaux: 8,0M € excl. VAT phase: preliminary design 09.2006-12.2006 timetable:

The position of Thiers Plaza at the end of the redesigned Avenue Thiers gave us the opportunity to implementare markable building which, because of its location, will be a new lighthouse of the avenue and provide a special control of the control ocific character to the whole neighborhood.

We believe that the urban position of the building will involve an architecture breaking with the office standard of the control of the building will involve an architecture breaking with the office standard of the building will be a support of the building will be a supporttypology. This position places us under the obligation to question this architecture developing effective solutions $in line with the needs of the contemporary of fice buildings \ while proposing a singular character to the site.\\$ We suggest a very simple but iconic building, whose plan design is defined by the shape of the plot and which the plot of thexploits at the best the bow effect exposed to the sight from the Avenue Thiers.

The new of fice building shows itself from this angle and we strongly aims to exploit the sculptural dimension by the sculptural dimension dimension discount dideveloping the kinetic effect that this situation generates.

HOUSING AND RETAILS

Mason Vicentino (Italy) location:

client: private

Campagnolo Ingegneria (structure and services) consultants:

gross surface: 600sqm (housing); 250sqm (retails)

1,0M € excl. VAT cost: phase: design development timetable: 02.2006-11.2006

The start up of this proposal for an housing complex in Mason Vicentino can be found in three main principles: the proposal for a proposal formula of the proposal formula odesireto mark the alignment of the buildings along the road; the creation of a penetration axis toward the center of the buildings along the road; the creation of a penetration axis toward the center of the buildings along the road; the creation of a penetration axis toward the center of the buildings along the road; the creation of a penetration axis toward the center of the buildings along the road; the creation of the buildings along the road the road the buildings along the road the rof the plot; performing an «intermediate space» between the front buildings, overlooking the road and new ones, oriented within the site.

The new building is affirmed by the clear layout of its volumes, creating spaces of an outstanding quality, opened in the contraction of the conand permeables toward road main axis, more introverted on the other sides.

The alternance of volumes and voids, of can tile versand holes, values the public space and the relationship between the relationstween the different parts of the design.

TWIN HOUSE

location: Marcon (Italy) client: private

consultants: Architect Paolo Dalla Tor (partner); Architect Enrico Robazza (partner)

gross surface: 250sqm cost: 300K € excl. VAT phase: schematic design

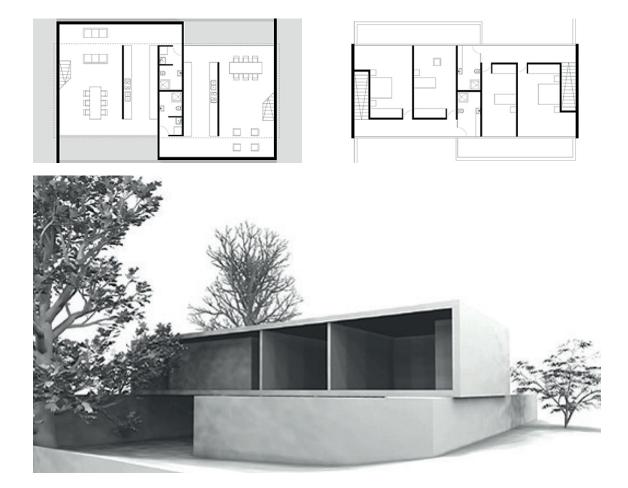

timetable: 01.2006-06.2006

The program provides the construction of a twinhouse for two brothers. The irwillingness to live together and, at the same time, preserve their private life was the starting point of the design.

The houses become specular one of the other, spreading their fronts both on the east and on the west side of the plot. This simple composition allows the houses to be nefit each one of a private garden.

Inside, bathrooms and other facilities are located in a central core between the two houses, to ensure acoustic protection to the living areas occupying almost the whole ground floor.

Upstairs a reversal in the space organization allows sleeping rooms to appreciate different views.

MOSCHETTO HEADQUARTER AND SHOWROOM

Trecastagni (Italy) location: client: Moschetto srl

Architect Enrico Robazza; Architect Paolo Dalla Tor (partner); Casella Ingegneria (structure and services) consultants:

gross surface: 2 000sam 3,0M € excl. VAT cost: schematic design phase:

timetable: 10.2005-06.2006

The analysis of this territory on the slopes of volcano Etna, which has developed as a group of urban settlements. $more or less homogeneous around in active {\it craters}, was the {\it real starting point} of the project for the {\it new Mosconsistency} and {\it craters} are the {\it craters} and {\it craters} are the {\it craters} and {\it craters} are the {\it craters} are$ schetto headquarter and showroom.

This project aim store produce the complexity of the territory in which it fits, where the unifying element is the vivid and the project aim store produced by the project all the project and the project aim store produced by the project aim store projectlight of this latitude. Relations hip with the lands cape of the surrounding country side besides the position of the latitude. The latitude is a side of the latitude of thsite, in the suburbs of Trecastagni, strongly influenced our architectural concept.

This news how room building, with a considerable size compared to the scale of the surrounding urban fabric, wants to be a mediation place between the city and the countryside.

The large terrace roof has been designed to be come an event vocated public place; the great hall-show room and the large terrace roof has been designed to be come an event vocated public place; the great hall-show room and the large terrace roof has been designed to be come an event vocated public place; the great hall-show room and the large terrace roof has been designed to be come an event vocated public place; the great hall-show room and the large terrace roof has been designed to be come an event vocated public place; the great hall-show room and the large terrace roof has been designed to be come an event vocated public place; the great hall-show room and the large terrace root and the large terrace rootopen-space is located below entrancel evel, under the terrace. The construction of this square goes to ghe terrace and the construction of the square goes to ghe terrace and the construction of the square goes to get the construction of the goes to get the construction of the goes to get the gowith our intention to make the large volume of the exhibition hall disappear, creating a public space that shall a probability of the probabilitoverlook the surrounding landscape, a majestic viewpoint open from the volcano to the Mediterrean sea. A system of different sized patios allows to easily enlights how room level and storage floor. If these court yards are the content of theare the negatives, two glass volumes emerge from the roof level to house the main entrance lobby, as mall cafe in the roof level to house the main entrance lobby, as mall cafe in the roof level to house the main entrance lobby, as mall cafe in the roof level to house the main entrance lobby, as mall cafe in the roof level to house the main entrance lobby, as mall cafe in the roof level to house the main entrance lobby, as mall cafe in the roof level to house the main entrance lobby, as mall cafe in the roof level to house theand a meeting room.
